Lumora AI - Products & Pricing

Product Portfolio Overview

Lumora AI offers a practical AI learning ecosystem designed to help learners understand modern AI concepts, build real projects, and develop production-ready engineering skills. Each learning resource can be used independently or as part of a structured AI engineering journey.

Lumora AI Courses - Structured AI Learning

Structured courses provide step-by-step learning paths covering modern AI engineering topics from fundamentals to production implementation.

- Generative AI and LLM application development
- RAG and advanced RAG systems
- Agentic AI and multi-agent systems
- LangChain and LangGraph implementation
- Production APIs, evaluation, observability, and deployment

Lumora AI Projects - End-to-End Implementation

Project-based learning shows how individual AI components work together inside complete applications and realistic engineering workflows.

- End-to-end source code and architecture
- Vector databases and retrieval pipelines
- Agent workflows and tool integration
- FastAPI and application interfaces
- Cloud deployment and production considerations

Lumora AI Tutorials - Technical Content

Focused tutorials explain important AI concepts, frameworks, tools, and engineering patterns through clear theory and practical implementation.

- Concept-focused technical tutorials
- Step-by-step coding demonstrations
- Architecture and workflow explanations
- Framework and tool walkthroughs
- Production AI engineering best practices

Lumora AI Community - Learning & Support

The Lumora AI community supports continuous learning through technical discussions, practical resources, project guidance, and structured AI learning paths.

The goal is to create a focused environment for building, learning, and deploying AI.

- Learning-focused discussions
- Project and roadmap guidance
- New AI engineering tutorials and updates
- Course and project announcements
- Community knowledge sharing

Pricing & Plans

Lumora AI provides a mix of free learning resources and premium structured learning experiences. Pricing may vary by course, program, platform, or offering.

Free Learning

Designed for learners who want to explore AI engineering concepts and practical implementations.

- Access to public YouTube tutorials
- Selected project walkthroughs
- Architecture and concept explanations
- Community learning content
- AI engineering updates and learning guidance

Premium Courses

Best suited for learners who want structured, deeper, and project-focused learning.

- Complete structured course curriculum
- In-depth theory and implementation
- Hands-on coding and end-to-end projects
- Production-oriented engineering practices
- Pricing depends on the selected course or learning platform

Team & Partnership Learning

Tailored learning, content, or technical collaboration may be available for organizations and partners based on scope and requirements.

- Custom learning or technical content requirements
- AI engineering workshops or collaborations
- Project-focused educational content
- Custom pricing based on scope
- Partnership terms defined per engagement

Billing & Access

- Course pricing and billing depend on the platform or offering selected.
- Access duration and included resources are specified with each course or program.
- Taxes and payment terms apply according to the relevant platform and local regulations.
